CLAIMS

1. (previously amended) A saber comprising:

a blade of generally triangular cross section and at least 20 inches in length having first and second concave sides converging from respective first edges to a common sharp edge and a third side joining the first edges of the first and second sides and providing a heel for the blade, the first and second concave sides having deep concavities; and

a hilt including a handle and a guard fixed to a first end of the blade wherein, adjacent to the hilt, a distance between the first edges of the first and second sides of the blade is on the order of 1.5 inches.

- 2. (original) The saber of claim 1, wherein a second free end of the blade is pointed.
- 3. (original) The saber of claim 1, wherein the blade is tapered along the length thereof to an acute second end.
- 4. (original) The saber of claim 1, wherein the blade is tapered along its length to a blunted second end.
- 5. (original) The saber of claim 1, wherein the blade is tapered along its length to a knife edge configuration.
 - 6. (canceled)

- 7. (original) The saber of claim 1, wherein the handle has an oval-shaped cross section with a long diameter bisecting an angle defined by the respective first edges of the first and second sides and the common sharp edge.
 - 8. (previously canceled)
 - 9. (previously canceled)
 - 10. (canceled)
- 11. (previously amended) The saber defined in claim 10 1, wherein, adjacent the hilt, a distance between the common sharp edge and a midpoint of the third side of the blade is on the order of 1.5 inches.
 - 12. (previously amended) A saber comprising:

and elongated blade of generally triangular cross section having first and second concave sides converging from respective first edges to a common sharp edge and a third convex side joining the first edges of the first and second sides, the first, second, and third sides being tapered along their lengths to a pointed first end of the; and

a hilt fixed to a second end of the blade and including a handle and a guard wherein, adjacent the hilt, a distance between the first edges of the first and second sides of the blade is on the order of 1.5 inches.

- 13. (original) The saber of claim 12, wherein the handle has an oval-shaped cross section with a long diameter bisecting an angle defined by the respective first edges of the first and second sides and the common sharp edge.
- 14. (original) The saber of claim 13, wherein the blade length ranges from 24 to 48 inches.
 - 15. (previously canceled)

16. (previously amended) The saber of claim 1, wherein, adjacent the hilt, a distance between the common sharp edge and a midpoint of the third side of the blade is on the order of 1.5 inches.
